Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims employ the term ‘derivative’ which is ambiguous since derivative is referring to material “derived” from the named formula. It is not clear whether or how further derivatizations may be included. It is recommended that the term ”compound” be inserted in place of derivative.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shetty US 6699989 in view of DN 106:18399, Chu et al abstract (1986), DN

104:129888, Narita et al abstract (1985) and DN 128:321632, Antons et al abstract (1997).

Shetty teaches preparation of naphthyridine-3-carboxylic acid in the manner recited without intermediate isolation. See, for example, column 15 lines 20-55 and column 23. Shetty differs in that it uses triethyl orthoformate as the cyclizing agent.

However, the claimed DMF dialkylacetal is a known cyclizing agent for the 5-fluoro-6-chloropyridinepropanoic acid corresponding to applicants' line [11]. To use somewhat differ but otherwise analogous cyclizing agents in an otherwise known process would have been obvious to one of ordinary skill in the art as the results, cyclized product, would not have been unexpected and therefore unpatentable.

No claim is allowed.
